Document for distribution among public

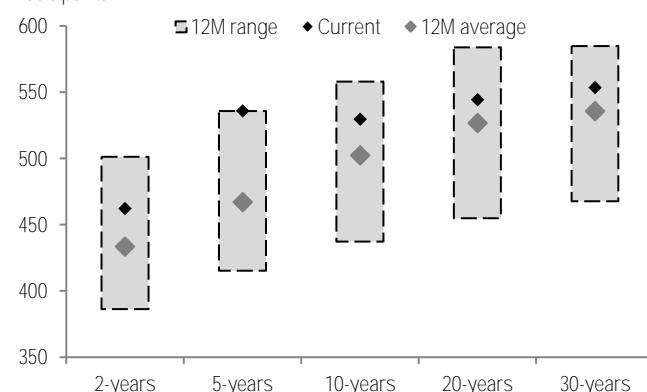

- The Mexican yield curve has experienced relevant pressures in the last sessions, overreacting to inflation fears that would result in a more hawkish stance from main central banks. In this sense, Mbonos average an adjustment of +20bps during the week, incorporating a breather in yesterday's session of ~7bps, although holding pressures of 30bps in mid-term securities
- In our view, this adjustment offers a good opportunity for short-term receiver strategies that capitalize the cheapening of this securities' valuation, especially in the 5-year area. In this sense, we recommend tactical long positions in Mbono Mar'26 with a short-term horizon, considering an entry level of 6.16%, target of 5.95% and stop-loss of 6.30%
- Mbono Mar'26 is currently not depicting a significant deviation vis-á-vis other maturities when analyzing its yield when adjusted by duration; however, its spread against the same-term US Treasury has elevated to a 12-month high and currently trades above its 1-year mean, contrary to other nodes in the yield curve with narrower differentials in relative terms
- In line with the most recent communications from Fed speakers, we believe the minutes from the last policy decision to be released next week will expose a cautious stance, allowing for the local rates' breather to extend benefiting this region of the curve. Additionally, [the market is integrating a fair valuation regarding Banxico](#), currently pricing-in implied hikes of close to +50bps for year-end (Banorte: +50bps)
- In a mid-term view, we still acknowledge risks for global rates, with the 10-year Treasury probably adjusting towards a more fundamental level according to current conditions, where we estimate 2021 closing at 2.15%

Determination of Target Prices

For the calculation of estimated target prices for securities, analysts use a combination of methodologies generally accepted among financial analysts, including, but not limited to, multiples analysis, discounted cash flows, sum-of-the-parts or any other method that could be applicable in each specific case according to the current regulation. No guarantee can be given that the target prices calculated for the securities will be achieved by the analysts of Grupo Financiero Banorte S.A.B. C.V, since this depends on a large number of various endogenous and exogenous factors that affect the performance of the issuing company, the environment in which it performs, along with the influence of trends of the stock market, in which it is listed. Moreover, the investor must consider that the price of the securities or instruments can fluctuate against their interest and cause the partial and even total loss of the invested capital.
